ANNUAL REPORT 2015

SKAGEN

A YEAR OF TWO HALVES

WE FOCUS ON FINDING VALUE, NO MATTER WHAT THE MARKET MAY SERVE US

ANNUAL REPORT | www.skagenfunds.co.uk

Dear Readers,

If I had to sum up the global events of 2015 adhering to Twitter's 140 character limit, it would probably read something like this: "Greece. Refugee crisis. Putin. Low interest rates. ISIS. Oil. Chinese market dip. Iran deal. Paris. Weak EM. Climate deal. Fed rate hike."

In contrast it would be nearly impossible for us to sum up the past year in SKAGEN in Twitter format. That is why we share this Annual Report with you, containing thousands of carefully selected words in order to hopefully provide a deeper understanding of our performance in 2015, how we respond to the trust our clients have placed in us – and a look towards 2016.

In May 2015 we reached a corporate milestone when we welcomed the concentrated global fund, SKAGEN Focus, into our family of funds. This was only the fifth time in our 22 years of operations that we have launched a new equity fund.

Our team of portfolio managers has been strengthened in the year and enhancements have been made to how the team generates and executes investment ideas. There has also been a further finetuning of how experience and insight are shared across the teams.

A mixed picture

Performance in 2015 was a mixed picture. Happily SKAGEN Global beat its benchmark index under the leadership of Knut Gezelius who took over the reins of the fund in November 2014. After improved performance in the second half of 2015, we had hopes that SKAGEN Kon-Tiki would also beat its benchmark, but it didn't quite make it. Our money market funds continued to provide steady outperformance. We will work hard to make 2016 a better year than 2015 in terms of performance.

We continued to see markets moving in a herd-like manner with passive investing, growth stocks and developed markets continuing to be in vogue. It may seem as though we are waiting for our style of active investing to make a comeback. However, if our way of investing was always in fashion we would find it difficult, if not impossible, to find unpopular investment ideas. For this reason alone, I would argue that over time active investors such as SKAGEN will actually benefit from an increasing number of passive investors in the market.

A common sense approach

Despite the fact that most of our funds have beaten their respective benchmark indexes in an impressive number of calendar years, our goal is to achieve long-term returns and not necessarily to beat a specific benchmark over each and every 12-month period. This brings to mind the well-known saying of Benjamin Graham — considered by many to be the father of value investing — that the stock market is a voting machine in the short term and a weighing machine in the long run. Simply put, Graham meant that in the long run the markets will measure the true value of a company rather than merely reflecting which companies are popular or unpopular in the short term.

In sum, we are not waiting for our investment philosophy to return to favour, rather, the merits of our common sense approach to investing have never disappeared. We thrive in the long term thanks to the market's failure to price assets correctly from time to time. As our CIO Ole Søeberg wrote in last year's Annual Report, sooner or later the laws of financial gravity will ensure that companies are rewarded for the value they create and thereby also reward us for our contrarian approach and choice not to follow the herd.

A course for the future

SKAGEN's ownership situation was an important theme during the year and we have now arrived at a solution that will ensure the long-term independence, continuity and alignment of interests that form the bedrock of SKAGEN. We have also seen some changes at Board level. After more than 17 years at the helm, Chairman of the Board Martin Gjelsvik stepped down in December. He oversaw the development of SKAGEN from a local fund provider in Norway to a European asset management company. On behalf of everyone at SKAGEN I would like to take this opportunity to thank him for his dedication to SKAGEN throughout so much of the company's journey.

Meanwhile, SKAGEN's Board of Directors has been expanded from five to six members, and we welcome the appointment of two new members, Henrik Lisaeth, our new Chairman, and Leiv Askvig. They both bring extensive experience from the financial industry. We also have continuity on our Board with the appointment of Anne Sophie Stensrud as Board member, having been Deputy Board member for 12 years.

With the renewed commitment from our owners, a new Board in place, along with our mutual solid grounding in SKAGEN's vision, values and culture, we stand strong. Looking around me at SKAGEN's employees, I firmly believe we have all the pieces in place to ensure continued success with a firm focus on our clients in 2016 and beyond.

CONTENT

If we are to avoid an extra dose inflation, Norwegian Prime Minister Erna Solberg (pictured) and other commodity-dependent politicians may be forced to "detox" if commodity prices continue downwards.

Two Russian companies, the food chain X5 (pictured) and the Moscow Stock Exchange, were among the six best contributors to SKAGEN Kon-Tiki in 2015.

Peter Hancock, CEO of American International Group Inc. (AIG), right, is interviewed at the New York Stock Exchange. AIG plans to return \$25 billion to shareholders over the next two years as Hancock divests assets and seeks to boost returns to protect his job amid criticism from activist investor Carl Icahn. AIG is one of the top 2015 contributors to both SKAGEN Flobal.

Lower energy prices in 2015 will likely trigger higher consumption and contributes to higher global GDP in 2016

US Fed, led by chairman Janet Yellen. Despite the rate-hike in December, the SKAGEN Tellus team does not believe in higher long-term policy rates due to caution around continued low inflation.

India and China are expected to be the main contributors to global GDP growth in the year to come. Pictured: Raghuram Rajan, governor of the Reserve Bank of India.

Investment director's report Introduction

- > 2015 continued where 2014 left off with a stronger USD, low interest rates and lower energy and commodity prices.
- > Equity investment returns for 2015 were volatile and with significant regional differences. US investors saw returns of minus 1.8% including dividends on their global portfolios and a meagre 1.4% on their US stocks. Meanwhile, EUR-based investors enjoyed returns of 9.4% on their global portfolios.
- > Although our key funds delivered excess returns in the second half of 2015, only SKAGEN Global outperformed for the year. In recent years our funds have suffered due to our low exposure to the US dollar and high exposure to emerging markets.
- Despite all the media gloom, global prosperity has never been higher, health has never been better and, relatively speaking, crime and war have never been lower. There is also a strong focus on improving the sustainability of global resources.
- > Global growth is expected to be slightly higher in 2016 than 2015, so the foundations for continued low interest rates and good earnings development are in place.

A year of two halves

2015 was characterised by large currency movements and a decline in energy and commodity prices. This had both positive and negative effects, depending on which region companies were active in. For some of our funds, the outperformance in the latter part of the year was not enough to make up for a disappointing first half.

Events in 2015

Global stock markets continued upwards for most investors in 2015, in line with the consensus at the beginning of the year. However, there were substantial currency movements in 2015 which meant forecast returns did not materialise for USD-based investors. 2015 was more positive for European investors. The decline in energy and commodity prices is obviously not good for regions active in that space. Nevertheless, for the vast majority of

the global population, lower input prices are a net benefit; lower petrol, material and food prices leave consumers and corporates with more to spend elsewhere.

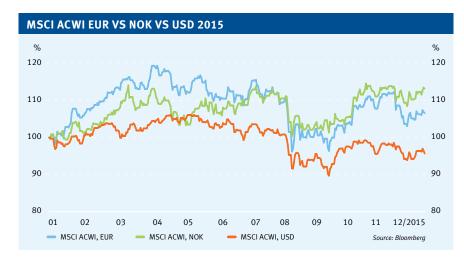

To illustrate just how much currency influenced returns, global stocks including dividends rose 15.3% in NOK in 2015, 8.7% in EUR and fell 2.4% in USD. The growth rate was roughly ten percentage points lower than in 2014 and in line with the underlying earnings growth of 8%. Asian and European earnings met

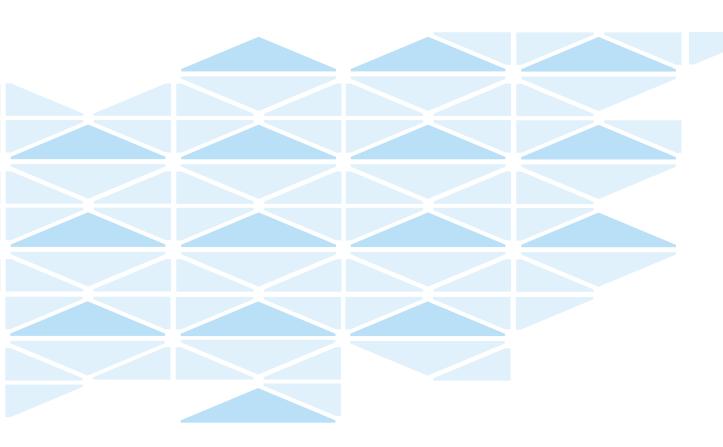

or slightly exceeded estimates, while American earnings, including Latin American earnings, disappointed.

Emerging markets fell 15% in USD and 0.5% in NOK reflecting weak commodity and energy prices – a key driver for many emerging markets.

There were fewer surprises in 2015 than in 2014, but we saw a repetition of certain themes including geopolitical unrest and climate oddities. The Ukraine crisis and Ebola in West Africa faded from media focus, to be replaced by the Syrian refugee crisis and Chinese expansion in the South China Sea.

One of the major events of the year was the Paris Climate Conference, COP21, and the ensuing agreement to reduce global CO2 emissions. The successful fusion energy test was another highlight, indicating that fusion energy may be a commercial way forward. But it will take until 2050 to get the process into production mode, so until then we need to rely on other sources of energy.

SKAGEN funds' performance

Although our key funds outperformed their respective benchmark indexes in the second half of 2015, the funds did not achieve the outperformance that we have seen from them in past years. 2015 is the second consecutive year that the majority of our funds delivered returns below that of their respective benchmarks. For a more detailed review of each fund please refer to the individual fund reports.

The performance of all our funds has been impacted by currency movements, the strong performance of USD assets, and the disappointing performance of emerging markets. When it comes to the equity funds, value-based investing underperformed growth-based investing by 7.5% percentage points.

We stand firm by our investment philosophy

One may well ask whether SKAGEN's value based investment philosophy or investment execution is at fault for our poor relative return over the calendar year. The answer is neither. We continue to pick individual companies with a good business model when the market price tells us that other investors do not correctly factor in the potential returns and risks. Nonetheless, the funds' benchmark indexes include many large growth companies, which benefit in a world with QE (Quantitative Easing or very low interest rates provided by the central banks) as the net present value of future earnings is very highly valued. SKAGEN is not opposed to investing in growth companies, as long as the valuation

is attractive. We do not, however, find value and hence a solid risk buffer, in many of the most popular companies at present.

Turning over all the stones

During 2015 the portfolio management team dedicated time to re-examining our analytical process, decision making and the risk factors in the funds and individual investments. The conclusion is that our investment philosophy, working methods and the exposure in our portfolios are solid. We continuously test all our equity investments for a 50% upside potential over a 2-3 year horizon and against a 20% downside risk. Obviously, some of our investment cases have not turned out as planned. All the learning points from investments, both good and bad, are taken to form a retrospective investment case library - a key source for ensuring good working practice and outperformance going forward.

Standing out from the crowd

If our portfolios looked just like everyone else's, we would not excel. Being different – or contrarian – is vital to achieving exceptional returns. This is a signature profile for SKAGEN; we are and will continue to be different.

One might then ask — when will we next deliver world class performance? The very low level of interest rates has created superior returns for true growth companies — and in many cases this has translated into very high — and more risky — valuations. Based on our value based philosophy, we have assessed

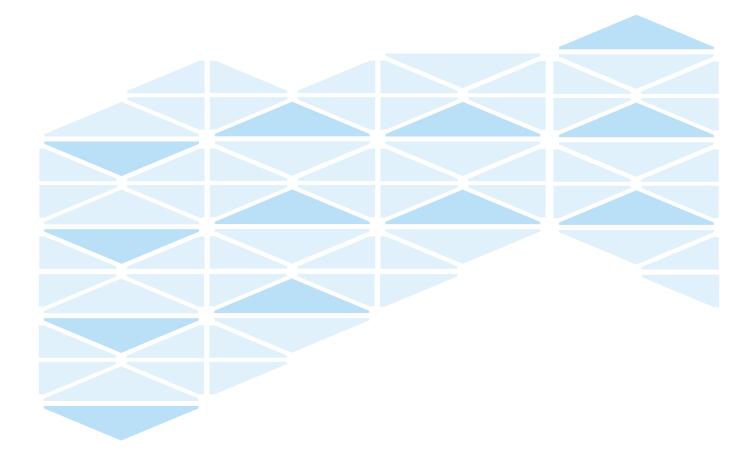

the investments in our bond and equity funds and concluded that most of them are in good shape to be able to deliver. We have trimmed exposure in a number of investments and by the end of 2015 the funds are more concentrated and with updated return profiles, triggers to release value, and risk factors to be monitored.

There is a saying that "a smooth sea never made a skilful sailor". The past five to six years in the financial markets have seen a steady upwards movement, so all investors have made decent returns. The question now is how investors will behave once we get into choppier waters, as we inevitably will.

A livelier year ahead

2015 in the Chinese zodiac was the year of the sheep – a calm animal which walks in flocks. As we reached the end of 2015 it became clear that some sheep flocks ended more or less where they had started.

Early on in 2016 the year of the monkey will begin. The monkey is a lively, intelligent and creative animal. In the past, the year of the monkey has often turned out to be a good investment return year even if the period was perceived as somewhat difficult as the monkey likes to tease. In 2016 we will likely see reduced correlation between financial assets classes and this provides a good backdrop for active and value based investors like SKAGEN.

2016 OUTLOOK

There are an overwhelming number of media and investment outlook reports for 2016 and they provide a solid sense of where consensus lies. While consensus is rarely correct, it is a valuable source of what the average investor has factored into asset prices.

According to the International Monetary Fund (IMF), global GDP growth in 2016 will be about 3.4% with China and India delivering most of the absolute growth. The US is expected to grow 2-3% and Europe and Japan should see positive but unimpressive growth of 1-2%. Brazil is the only major economy to be in recession as Russia is back on firmer ground.

The consensus view of interest rates is that they will move up a tad driven by tighter monetary conditions in the US. Europe and Japan will continue with low rates.

Company earnings are expected to increase 8-10% in local currencies with dividends of 2-3% in addition. Valuations for 2016 are at 15-16 times earnings and with continued low interest rates, this looks likely to remain. However, higher US rates will likely create some turmoil.

Earnings growth and valuation consist of many moving parts and the outcome is never certain, so history tells us investors should be prepared for 15-20% fluctuations over the year.

It is one thing to have a consensus base case roadmap for 2016, but what makes investing interesting is all the moving parts that can alter the way forward. For investors who carry out prudent preparations, solid analysis, scenario testing and who use pattern recognition from past experience, the potential changes can work to their advantage. While some investors mistakenly view increased volatility as a risk, we see it as an opportunity as financial assets get pushed down to attractive valuation levels.

While 2016 promises its fair share of uphill struggles, there are some opportunities on the horizon. We will continue to pick individual companies with good business models and where we see clear triggers for revaluation. Pictured here, Marian Croak, the vice president of access strategy and emerging markets at Google Inc speaks at an event in New Delhi, India. Google was one of the top three contributors to SKAGEN Global in 2015.

OPPORTUNITIES

- China's new 5 year plan focuses on further urbanisation, encourages the expansion of the private and service economy and motivates increased innovation.
- 2. Low energy prices trigger higher consumption and push world GDP to above 4% a trigger for better utilisation of capacity in cyclical businesses and hence improved profitability.
- The change in demographics is slowly creating a lack of skilled labour in some developed markets, which will create upward pressure on wages.
- 4. Commodity prices fell in 2015, however this could turn out to be an opportunity in 2016 as financial strains in the industry improve the supply and demand balance

DEVELOPMENTS WITH MULTIPLE EFFECTS ON MANY BUSINESSES

- Car and traffic safety improve as cars get cameras and sensors that enable them to avoid collision. This would impact insurance, healthcare and automotive companies' high-margin revenues from spare parts.
- 2. Further steps to cure cancer and other previously dangerous and difficult to cure illnesses. This would impact pension, work force participation and hospital needs.
- Consumption in Developed Markets is replacement driven and new consumption is often intangible and difficult to grasp in a globally scalable business model. Consumption in Emerging Markets is tangible so easier to grasp in listed companies, but also fragmented in many aspects.

RISKS

- Poor trading and liquidity conditions in some segments of the capital markets could set off a domino effect of investment losses.
- US investors did not get any returns in 2015, so if there is a move towards lower risk appetite, then corporate bonds, equities, ETFs, etc. could suddenly enter a downward spiral. Higher short-term rates in the US could accelerate this move.
- 3. Low oil and commodity prices create a funding problem in countries dependent on these assets as well as financial institutions with too much exposure to these sectors.
- 4. The geopolitical turmoil in the Middle East, the South China Sea and elsewhere will likely create several periods of volatility in 2016. The situation needs to be monitored closely for potential opportunities that may arise.
- Low interest rates lead to the misallocation of capital and poor return on investments which in turn lead to decline of unsustainable asset values.

Ole Søeberg
 Investment director

SKAGEN Global

A world of opportunities

- > Beat its benchmark in 2015 and has outperformed its index in 15 out of 19 years.
- The portfolio has been concentrated, the quality of the companies improved and risk analysis enhanced.
- Well positioned to deliver attractive returns in 2016.

Increased concentration and strong US stocks

In 2015, SKAGEN Global generated 3.4% absolute return while the benchmark, MSCI All Country World Index, returned 3.3% (measured in GBP and rounded to the nearest decimal). SKAGEN Global has now outperformed its benchmark index in 15 out of 19 years since its inception in 1997.

2015 was a transitional year during which the portfolio team completed the changes introduced at the end of 2014. Our overall goal has been to increase the portfolio concentration, improve the quality of companies in the portfolio and deepen the risk analysis, without sacrificing the investment philosophy. The changes have now been implemented while the fund remains characterised by its distinctive, value-based investment philosophy.

^{*} Figures shown are indicative, based on a conversion of the NOK values to GBP at the exchange rate of NOK 13.0425 / GBP 1.

^{*}The benchmark index prior to 1/1/2010 was the MSCI World Index.

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments.

Sharper focus and enhanced risk analysis

SKAGEN Global is now a more concentrated portfolio in which the number of holdings has been halved from over 100 positions in the autumn of 2014 to around 50 positions at the end of December 2015. Meanwhile, the concentration ratio of the fund's ten largest positions increased from 33% to 41% during the year.

The team have also enhanced risk analysis in the investment process. Downside risk in particular has, in our view, become increasingly relevant given that there is now further to fall after nearly seven years of steady stock market gains. The Global team have therefore worked with SKAGEN's risk department to develop a multifaceted risk report to assist in portfolio construction.

A nurse is seen through a General Electric scanner in Hong Kong Integrated Oncology Centre in China. General Electric has during the year implemented its strategy to become a pure shareholder-friendly industrial conglomerate and the stock price has risen by almost 28 percent in dollar terms

Avoiding value traps

Within the framework of risk management, we have also increased our focus on environmental, social and corporate governance (ESG). Two oil-related portfolio holdings, BP and Lundin Petroleum, previously attracted attention for ESG breaches: BP for the Macondo incident in 2010 and Lundin Petroleum for alleged controversies associated with oil exploration in Sudan in the early 2000s. We believe that both companies have significantly improved their ESG profile recently and our investment in these shares is therefore in line with SKAGEN's ethical guidelines.

Our tolerance for companies with weak corporate governance, high debt levels and exposure to political risk is lower today

than it has been in the past. This is to avoid getting caught in so-called value traps, whereby shares may trade at low multiples and appear cheap but are in fact value destructive without the ability to generate shareholder value over time.

During the year SKAGEN Global has resolutely adhered to SKAGEN's characteristic value based investment philosophy. The fund's 35 largest holdings trade at 12.7x 2016 P/E and 1.3x P/B while the fund's benchmark index is priced at 14.9x 2016 P/E and 1.9x P/B. SKAGEN Global is thus valued at a significant discount to the index. The portfolio management team will continue to be guided by SKAGEN's investment philosophy when managing the fund.

SKAGEN GLOBAL

2015 SCOREBOARD

The largest positive contributors to the fund in 2015 were three US holdings: General Electric (GE), American International Group (AIG) and Alphabet (Google). The three largest detractors from fund performance in absolute terms were Banrisul, State Bank of India and Kazmunaigas.

GE

We invested in industrial conglomerate GE during the first quarter of 2015. Our investment thesis was that the company could release a huge amount of hidden value by selling the majority of the banking business that it had, somewhat inexplicably, built up during the previous 15 years. Our analysis also showed that the market had underestimated the company's willingness and ability to create value by improving its industrial division and capital allocation. During the year GE impressively realised its strategy to become a pure shareholder-friendly industrial conglomerate and the share price has increased by almost 28 percent measured in dollars.

AIG

The US insurance conglomerate AIG continued its restructuring journey during 2015 and delivered over 12 percent total return in dollar terms. We have been a long-term shareholder in AIG for several years and have watched the share price rise from USD 30 in 2012 to over USD 60 in 2015. With a price target of USD 90, we continue to view AIG as a very attractive investment. AIG is the fund's largest position, accounting for seven percent of the portfolio.

GOOGLE

The search engine giant Google changed its name to Alphabet in 2015 and delivered a total return of around 45 percent in dollar terms to its shareholders, one of which is SKAGEN. We have long argued that the market greatly underestimates Alphabet's earnings potential and capital allocation discipline. Over the past year part of our investment thesis has been fulfilled as the market has started to attribute to Alphabet a market value that is closer to our estimation of the price that the company deserves.

BANRISUL

The Brazilian regional bank was not able to withstand the painful economic crisis that swept through Brazil as a result of weak commodity prices, lack of market reform and political bribery scandals. Although the bank trades at a low 0.4x 2016 P/B, we see better risk-reward in other companies in the portfolio and therefore chose to sell our holding in the autumn.

KAZMUNAIGAS

Kazmunaigas, an oil company based in Kazakhstan, has been in the fund's portfolio for several years but has consistently performed below expectations. The oil price collapse was obviously a contributing factor to the 50 percent fall in share price in dollar terms in 2015. At the same time, we feel that despite numerous requests from investors, the state-controlled company still has shortcomings in corporate governance which ultimately puts minority owners at a disadvantage. We have therefore divested our shares during the year and have instead opted for Lundin Petroleum and BP in the oil sector.

STATE BANK OF INDIA

State Bank of India (SBIN) fell by 27 percent in local currency during 2015. This can largely be explained by the fact that Prime Minister Modi did not live up to high expectations of the pace of reform in India. Disappointed investors chose to sell their Indian holdings, including SBIN. As long-term investors, we continue to believe in SBIN which at year-end represented around 2.5 percent of the fund and is our largest Indian holding.

Lundin Petroleum is one of the largest shareholders in the giant oil field Johan Sverdrup on Utsirahöjden in the North Sea. The field will account for a quarter of Norwegian oil production when it reaches its plateau production of 550,000 to 650,000 barrels of oil per day. It is expected to produce oil for 50 years

WELL EQUIPPED FOR 2016

SKAGEN Global is well prepared for 2016. Our portfolio of around 50 holdings is well diversified in terms of both geography and sector. We have maintained a significant underweight in US equities as we think that the US stock exchanges appear to be relatively fully valued after several years of good returns. This is exemplified by the profit margins of US companies which are at record high levels, leaving the companies with limited ability to further increase profitability.

We have more confidence in the European market where we are overweight. Here the profit margins are around the historical average and we therefore believe that there is clear potential for improvement, especially if Europe manages to speed up it's economic recovery. The promised quantitative easing from the European Central Bank is also likely to provide some tailwind during the year.

Selective stock picks

Following the negative developments in 2015 many companies in emerging markets are starting to look increasingly attractive from a valuation standpoint. Nevertheless, the commodity rally that lifted many of these economies during the last decade slowed significantly as global demand slowed, while the supply of raw materials has gradually

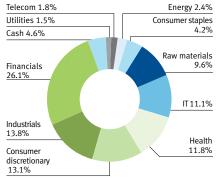

increased. Countries like Brazil, South Africa and Russia consequently face significant challenges. The strained economic circumstances should not be underestimated and it is imperative to be extremely selective when buying stocks in emerging markets at present.

At sector level, the fund is overweight mainly in banking and finance. Several companies in the financial sector have been put through the wringer since the financial crisis and as a result have cleaned up their balance sheets and built up their solvency ratio. Many investors who had their fingers burnt during the financial crisis have hesitated to return to banking and financial companies. In this regard SKAGEN Global swims against the tide. Our analysis indicates that this clean-up process has led to a number of well-capitalised finance companies now being in a position to either return free cash directly to shareholders or reinvest profits in the business to drive future earnings growth. Two examples are the US bank Citigroup and the Dutch insurance company NN Group, which together account for around eight percent of the fund.

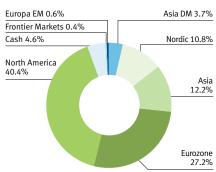

We are more sceptical towards companies in the consumer goods sector, which the been flourishing for a number of years and have experienced significant multiple expansion. As value investors our motto is to buy low and sell high, which is why we currently see relatively few companies in this sector that are trading at attractive multiples. As a result, we are six percent underweight in the sector vis-à-vis the index, but we have a couple of very interesting names in the portfolio, such as the US chicken producer Tyson Foods and the Danish brewery giant Carlsberg. In both cases, we believe that there is much greater upside in the shares.

Overall, we believe that the changes implemented in the fund during the past 15 months will result in attractive returns in both absolute and relative terms in 2016. The fund's 35 largest positions have a 37% average upside potential to our target price and limited downside - this bodes well for the coming year.

SECTOR DISTRIBUTION

New growth

Developments in China once again affected the other global emerging markets in 2015. Instead of industrial growth, we are now seeing growth in consumption and services.

SKAGEN Kon-Tiki had a disappointing year in terms of absolute return, which was -11.5% as measured in GBP. The relative performance improved substantially through the year, from -5.4% at the end of the first half to 1.5% at year end.

In recent years, we have seen the start of the year continuing as the previous one ended. At the start of 2015, the recovery in the Chinese market continued on from 2014 and this peaked in April. SKAGEN Kon-Tiki performed weaker than its benchmark index during this period as the fund was underweight the Chinese stock market. Our Korean investments, Hyundai Motor and Samsung Electronics, also struggled during the period.

The general optimism in the first half of the year gave way to uncertainty in the second half, particularly regarding economic developments in China. This has continued in 2016.

Currency movements were another influencing factor in 2015. The early, negative impact of the continued fall in commodity prices affected individual stocks significantly and had a major impact on the currency developments of many commodity-dependent countries. As was the case in 2014, the relative currency movements in global emerging markets were a significant contributor to their underperformance vis-à-vis developed markets. The important exception was Chinese companies listed in Hong Kong, which has its currency linked to the US dollar.

 $^{^{\}star}$ The benchmark index prior to 1/1/2004 was the MSCI World Index.

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments.

As usual at the start of a New Year there are a number of things to be concerned about, including developments in China. It may be a positive sign that employment in China has so far been immune to falling stock prices, declining foreign exchange rates and lower industrial production.

CHINA

Developments in China have defined the past year and a half and will continue to be decisive for some time to come. Developments in emerging markets in 2016 will continue to be inextricably linked to China. The country's weighting in the MSCI Emerging Markets Index is high and rising and the country is a dominant customer, supplier and competitor to other emerging market countries.

We took the opportunity in 2015 to take profit in several of our Chinese companies and we continue to have a low proportion of Chinese stocks in the portfolio. This is because access to safe, undervalued companies is limited and Chinese stock markets face significant structural adjustments ahead. In addition, the majority of those Hong-Kong-listed shares available to us are in industries that may be negatively affected by the structural changes we envisage in the Chinese economy.

In the absence of a large stimulus package from the authorities, we still anticipate low industrial growth in China. However, it seems that the strong growth in the consumption and services sector will continue and perhaps accelerate, which is in line with the country's

political and social targets. The framework for this seems to be in place as savings are high, household debt is low and wages are rising. Many worry that the weak momentum in manufacturing production will prompt the country to devalue its currency. This does not seem to be logical view in our opinion. The country has the world's largest balance of trade surplus and the terms of trade are already improving substantially as a result of the decline in global commodity prices. Besides this approach would be at odds with their targets of increased productivity and improved purchasing power.

The Chinese currency now follows a basket of currencies rather than just the USD, in order to prevent the exchange rate developing unfavourably relative to the majority of its competitors.

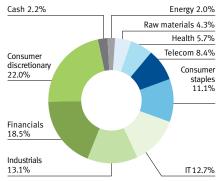

Developments in China still make us cautious about having large positions in energy or raw material companies and the portfolio is currently more geared towards consumer companies. However, conditions can change rapidly and we will act accordingly.

GEOGRAPHICAL DISTRIBUTION

THE FUND'S INNER LIFE

After the weak investment performance in 2014, we started a process to re-evaluate our risk processes, review our buying and selling discipline and better formulate investment cases. This does not mean that our time-tested investment philosophy has changed, but we have evaluated and adjusted the processes for putting it into practice.

As a result of the review, we sold out of over 30 companies in 2015. The portfolio now has a concentration ratio that is similar to what it was in the fund's infancy.

In 2015, SKAGEN also increased its focus on environmental,

social and governance-related factors (ESG). By increasing the focus on these factors in our analysis of investments, we have also reduced the business risk. We are already seeing the positive effects of this.

For the first time since 1988, more global money flowed out of emerging markets in 2015 than was invested. Investors have also taken money out of SKAGEN Kon-Tiki, but the process has been a smooth one. As a result of redemptions, the fund has more room to manoeuvre going forward.

SHIFTING SANDS

The premise that commodities and global emerging markets are correlated has proven to be an extremely tenacious one. Traditionally, emerging markets are considered to be commodity suppliers, while 'established' markets are categorised as commodity consumers.

Over the past decade, however, many global emerging markets have gone from being commodity exporters to becoming commodity importers. Nevertheless, the aforementioned perception has meant that falling commodity prices have contributed to make emerging markets even more unpopular than before.

Playing leapfrog

If we look at individual emerging markets, it is striking how many of them appear to be leapfrogging industrialisation and heading straight into service sector dominance.

We may be at a crossroads globally. The general perception these days is that cupboards in the west are full and that environmental friendliness is in focus. Emerging markets, on the other hand, just want more and better food. They also want access to personal freedom by means of private transport, but not necessarily like we have it.

Which brings us back to commodity prices.

We are now facing a world in which the use of commodities is falling relative to global growth. To a large extent, growth is now about when we will reach a time of "peak stuff"; When will the cupboard be full?

Lid on prices

After 25 years of drought, the superboom years from 2003 to 2011 provided manufacturers with the money and ambition to massively expand global capacity for the production of commodities. Physical expansion is now putting a lid on price increases and contrary to what analysts told us a year ago, it is not historical costs which determine what commodity prices should be, but rather future costs.

The oil price has fallen at almost the same rate as the costs. The lifting costs, which reflect the price of extracting a barrel or a kilo of a raw material, have fallen even more rapidly.

While we previously operated with more or less fixed foreign exchange rates and countries devalued or revalued a currency as required, we have now entered a new era. Commodity producers such as Russia, Canada, Australia, Brazil and Norway are allowing their currencies to fall in order to give indebted producers some respite from the ironclad rule that lower prices lead to better productivity.

Exceptions

All these supply and demand challenges make it difficult to be optimistic about commodity prices in the near future. The sole exception is agricultural commodities. Four years of falling prices have meant that capacity here has not increased substantially. Demand for fertilisers and pesticides has not increased much either. We have already seen better prices for palm oil and sugar, despite the fact that they are oil substitutes. This gives an indication of what will happen in the commodities short

We do not have a precise estimate of what the oil price will be in 2016. We accept the fact that Saudi Arabia is content with USD 30 or 25 a barrel, however, the day they change their mind, we will change ours. According to SKAGEN's investment philosophy, we will be pragmatic, not dogmatic. We therefore cannot ignore the fact that in 2016 we will have access to super assets at a decent price.

An employee, left, speaks with an attendee as she tries out a Samsung Electronics Co. Galaxy S6 smartphone at an event in South Korea in April 2015. Samsung expects the Galaxy S6 smartphones that debut Friday to set a sales record for the company's high-end devices as it tries to win back customers flocking to Apple's iPhones.

CONTRIBUTORS

The best contributors in 2015 were Samsung Electronics, Richter Gedeon and Frontline.

Samsung Electronics experienced a negative earnings trend in 2014, although earnings are still at a high level. This trend levelled off in 2015. The big change for the company last year was improved shareholder policy, with a doubling of the dividend ratio and significant share buybacks, which was particularly advantageous for our preference shares. The outlook for 2016 indicates stable earnings, but we can already see early signs of the company's new initiatives in electric vehicle technology and medicine.

Frontline and Frontline 2012 were merged and Frontline continued as the surviving company. In addition to a good tanker market, newly established future ambitions and dividend levels were declared. This led to a revaluation of the company. The coming year looks promising in terms of valuation, cash flow and stressed asset markets.

Richter Gedeon's share price increased in 2015 on the back of new product launches, which overshadowed the market's traditional concerns over the company's large proportion of sales to Eastern Europe. The company's valuation still has a way to go before it reaches the level of similar companies in developed markets.

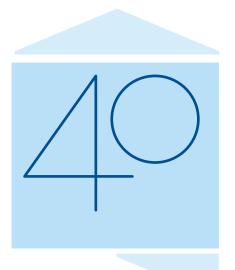

It is worth noting that our two Russian companies, X5 and Moscow Stock Exchange, were among the ten best contributors last year. This demonstrates that it is possible to find good companies in troubled markets. It is important to remember that the weak trend in a number of emerging markets is to a great extent, due to foreign exchange more than falling stock prices. A number of emerging markets have therefore not seen their valuation fall substantially. We have also seen many earnings disappointments in companies. This is in large part due to weaker economic growth than expected, but the companies themselves have also overinvested and lacked financial discipline. In several of our companies, we are pleased to see a change for the better, as weak returns to investors have increased pressure on company management and the main owners to improve corporate governance.

Not entirely surprisingly, two of the fund's three largest detractors from performance are Brazilian companies. The savings bank Banrisul fell 60% in local currency, but the figures have not yet been noticeably affected by rising loan loss provisions. The principal shareholder, the state of Rio Grande do Sul has payment problems and the market's concern is the extent to which this will eventually affect the many public

employees who are customers of the bank. On top of all this, the credit rating agencies have downgraded Brazil's public debt to junk status. However, with mainly private customers and strong margins, the valuation is at a record low 3 times earnings. This is lower than during the financial crisis of 2008-09. The dividend yield is 17.5% and can give the aforementioned junk bonds a run for their money. We therefore added to the position at the end of the year.

Iron ore producer Vale used the competitive advantage of falling exchange rates to undercut global iron ore prices, which led to a free fall in prices, earnings, dividends and consequently the share price. We made a loss on this investment and exited the company, partly also as a result of our increased ESG focus after a terrible mining accident in late autumn.

We also sold out of AirAsia after it became clear that financing opportunities for the company's significant investment program would be compromised as a result of its large claims on affiliates with questionable ability to repay in the short term. Although the share price has recovered somewhat after we sold out, we maintain that in such cases it is better to be safe than sorry.

OUTLOOK

The conditions for 2016 being a better year than 2015 are definitely in place.

Global emerging markets currently trade at a significant and increased discount to industrialised markets. The discount is 40% on earnings and 50% price to book equity, something that has not been seen since the late 1990s. SKAGEN Kon-Tiki's portfolio trades at an even greater discount.

The fund trades at 8x expected earnings in 2016, and 0.8x book equity. In our view this gives a potential upside in our securities portfolio of 56%, which is not far off financial crisis valuation. However several markets with distressed and low valuations lack catalysts for a rerating. Nevertheless, history has shown that these triggers can materialise more quickly than expected.

While we wait for a revaluation of the markets in general, we continue to work on increasing the focus on company quality. In addition, it is more important for us to look at company-specific criteria for revaluation, and this has been our focus during 2015.

SKAGEN Focus

In pursuit of exceptional investments

- After its first seven months, the fund has built up a portfolio with a highly attractive risk/ reward profile
- In a volatile year there were a few positive contributors, including Omega
 Protein which gained over 100% (in NOK) in the period
- We continue to look for undervalued securities with major potential catalysts for releasing value over 2-3 years

A few bright spots in a turbulent first year

The fund was launched on 26 May 2015 in what turned out to be a most volatile year. This environment has allowed us as long-term value investors to build up a portfolio which, in our view, has a highly attractive risk/reward profile.

In many ways, 2015 turned out to be a continuation of the environment we witnessed in 2014. This included continued elevated levels of global quantitative easing (QE), especially in Europe, a horrible climate for oil prices as OPEC and other producers showed minimal interest in reducing supply and another devastating year for commodities which almost indiscriminately fell across the board despite quite different fundamental properties. The weaker Chinese economy, or perception of such, was the main explanation for the fall in commodities in combination with pure financial speculation. Chinese equities were exceptionally weak in the second half of the year together with a substantial devaluation of the Chinese renminbi. All in all, for the above-mentioned sectors and geographies, 2015 was truly an Annus Horribilis (to quote Queen Elizabeth II's classic speech from 1992).

To add insult to injury, the historically unique environment in which we saw ultralow interest rates and the subsequent collapse in specific sectors such as energy and commodities almost mindlessly pushed the momentum-driven money-flow into a few so called safer "growth" stocks, mainly large caps. This category of stocks acts as a bond proxy in a zero-interest rate world and we think there is very little risk priced into the future profit generation curve to justify current valuations. We may look less clever now, as the fund has had very little exposure to these – in our opinion – grossly overvalued growth stocks, and this has had a negative effect on our relative performance.

We have had marginal exposure to oil prices, primarily through US exploration company Whiting Petroleum. While we have held stocks that are the main beneficiaries of the lower oil price, such as Malaysia-based budget airline Air Asia and air-leasing company AerCap, we have not yet been rewarded in these company-specific situations.

Since launch the fund has only held two companies in the commodities space, namely Canada-based silver producer Pan America Silver and Australian based BHP-spinoff South32. Both have exceptionally strong balance sheets allowing them to withstand a prolonged period of lower commodity prices. While the five above-mentioned companies are all on the list of the main sinners in the fund in 2015, we think their overall business models are sound and offer substantial value in a world of more normalised commodity prices. We also added Canadian copper producer First Quantum during the year, which in a very short period of time doubled in price, allowing us to take a healthy profit.

 $^{^\}star$ Figures shown are indicative, based on a conversion of the NOK values to GBP at the exchange rate of NOK 13.0425 / GBP 1.

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments.

US-based Omega Protein specialises in Omega 3 derived from fish oils. The company's share price rose over 100% measured in the fund's base currency in 2015.

Flash memory manufacturer SanDisk contributed nicely to fund performance in 2015 following a takeover bid from rival Western Digital, reflecting a premium of 40%

BRIGHT SPOTS

While the Queen in her above-mentioned speech said she was unable to look back on 1992 with "undiluted pleasure", 2015 has offered a few bright spots for SKAGEN Focus.

The fund was launched on 26 May 2015 and passed the NOK 1bn (approx. EUR 100m) assets under management mark just before year end. There were several positive performers in absolute terms in the fund in the year, including the US based protein-producer Omega Protein. The company rose over 100% measured in NOK in the year after it delivered strong results in its human-nutrition business and launched plans for strategic actions to deliver shareholder value. We scaled down the position during the year to reflect the adjusted risk/

reward profile in the investment case. This is a good example of how the upside to our price target affects position sizes in our portfolio.

Our largest position (weight 8.8%) in US multi-line insurer AIG delivered a return of 5.5% measured in USD in 2015. The company has been pressured by activist investors – led by the well-known Carl Icahn – to consider splitting its operations into three parts. Another of the fund's holdings, the US-based flash-memory producer SanDisk, also contributed nicely to fund performance in 2015. The company received a USD 86.50 per share bid from competitor Western Digital, reflecting a more than 40% premium.

DIESELGATE

One particular event during the year allowed us to enter two investment cases, namely the Volkswagen diesel-scandal. We saw most auto-related stocks fall sharply on the news, irrespective of their exposure to the Volkswagen situation. In this environment we added the German semiconductor-producer Infineon to the portfolio, after the company experienced a massive unwarranted fall in stock price. With exceptionally poor timing, the German based auto-parts maker Schaeffler made its debut on the stock exchange the week of the Volkswagen scandal, and was forced to cut its IPO by 50% (both price and size to reflect a 30-40% discount to its peers). We took advantage of this great opportunity and the stock quickly rose 30% measured in euros in the year from our inception price.

Other newcomers to the portfolio included Swiss baker Aryzta, essentially a rare turn-around situation in the Consumer Staples sector, and US-based private label card provider Synchrony Financial, which was spun off from GE late in the year at very attractive valuation levels. Finally, we also established our first position in Brazil, after a massive fall in the country's currency, in major beef exporter, JBS.

NOT SATISFIED

In this environment, following only seven months of active fund life, the fund posted a return of -12.0% as measured in GBP. At the same time, the fund's benchmark index, the MSCI All Country World lost 3.4% in GBP. This is a rather short timeframe for any serious evaluation of fund performance, but we are obviously not satisfied with the results so far.

Nevertheless, we enter the New Year with a concentrated portfolio of a select 32 holdings where the top 10 positions constitute 48% of the fund. We will continue to apply our core philosophy with regard to finding undervalued securities (cheapness) and have major potential catalysts for releasing this value (change) over a 2-3 year horizon. A more than 50% upside in the fair price of the equity is required for us to consider a position, but importantly this needs to be accessed with a controlled level of risk.

The largest risk factors in the fund are yield curve, reflecting the rather high weighting in financial services and price competition, essentially companies operating in what is unjustifiably perceived to be a commoditised market. Our weighting in financials is substantial, but represented in the portfolio by companies of many shapes and forms for diversification purposes. Investment cases like US regional bank Citizens Financial, CIT and AIG are all undervalued without the help of higher interest rates, but are clearly well-positioned if interest rates continue to rise in 2016, following the first Fed ratehike in late 2015.

We thank you for your trust and support for the fund and look forward to a prosperous 2016.

Photo: Bloomberg

First Quantum

First Quantum is a Canadabased mining and metals company. It has seven mines across the world. It produces copper (70%), nickel (20%), gold, zinc and platinum. It mainly operates mines in Zambia, Spain, Finland, Australia and Turkey. In 2014, First Quantum produced 420k tonnes of copper, 46k tonnes of nickel, 230k ounces of gold, 56k tonnes of zinc and 60k ounces of platinum.

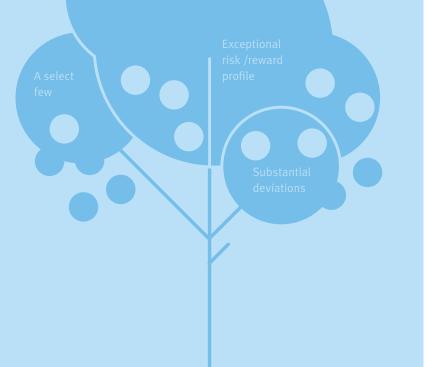

Schaeffler

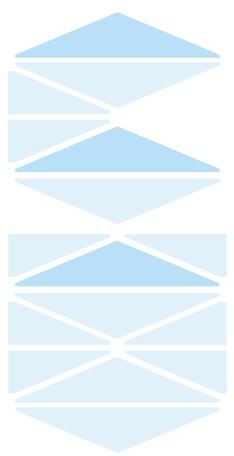

Schaeffler AG is an integrated automotive and industrial supplier with more than EUR 12bn in sales and 84k employees. Founded and mainly owned by the Schaeffler family (who also hold a majority stake in Continental, CON GY). The company was listed on the market on 9 October 2015 after cutting the IPO size by 50% due to the VW scandal (VW is Schaeffler's largest client).

Synchrony Financial

The company is the leading US provider of private label credit cards with a 42% market share in the US. 75% of the total loan book (USD 61bn) is related to Retail cards and 25% to Installment loans/Payment solutions. The company has been a publicly listed company since August 2014, and was then partly separated from its parent GE after 80 years of operation within GE Capital. GE finalised the separation of the company in November 2015 at which point the fund initiated a position.

Brazil-based JBS transformed itself from a mid-sized local beef producer to the world's largest animal protein processor in just a few years since its IPO in 2007. It is now the world's #1 beef, #2 poultry and #3 pork producer by sales. 85% of revenues are derived from outside of Brazil.

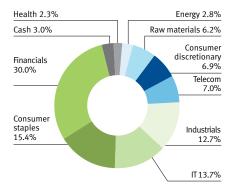

The overall objective for the fund is to find and invest in a select few investments with exceptional risk/reward profile from an absolute return perspective.

The fund is exposed to a combination of unique company specific factors, which over time should result in substantial deviations versus the underlying market.

Good opportunities

The equity fund SKAGEN Vekst ended 2015 with a return of -3.7% measured in GBP. We are not satisfied with this result in a year where the opportunities for far higher returns were certainly present.

Falling commodity prices and low energy prices were not enough to boost the return. While the fund performed better than the Oslo Stock Exchange, it underperformed its index due to its low exposure to the US. While the overall US stock market was virtually flat over the year, we lost out on the value increase that came with the increasingly strong dollar. In addition, the fund suffered from its relatively low exposure to the Danish companies within medicine and renewable energy that performed well during the year.

Generally speaking the global equity markets in 2015 felt the effects of falling commodity prices, while the expected positive effects from the drop in oil price failed to materialise. One explanation for this may of course be that countries in emerging economies took the opportunity to cut subsidies, but all else being equal, we should start to see the effects during 2016. Most countries should continue to benefit from low energy prices, not least emerging economies that are net importers of oil.

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments.

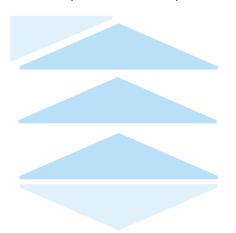

Carlsberg was able to demonstrate a strong share price performance after the new CEO presented the restructuring plans and new strategy for the next few years.

FEW LARGE CONTRIBUTORS

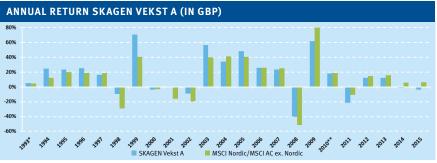

If we look at the absolute return in the fund, there were too few contributors among the fund's largest investments in the year as a whole. The sector that delivered the best absolute return was the finance sector, where companies like Danske Bank, Citigroup and Russian Sberbank were positive contributors. Companies in the consumer goods and technology sectors also had positive performance.

On the negative side, our Norwegian supply ship-owners once again pulled down the fund's return. At the end of the year these companies (Solstad Offshore and DOF) only accounted for 0.8% of the portfolio, but the fall in share price throughout the year detracted by as much as 2 percentage points. We did not anticipate how much these companies would be affected by the drop in oil price. The commodities sector (namely Norsk Hydro) performed extremely weakly and industrial stocks in the fund, particularly within transport, also had a bad year.

IN A CLASS OF ITS OWN

In Scandinavia, Denmark was in a performance class of its own last year, up around 40% measured in euro. Sweden ended the year up 5% in euro, while the Oslo Stock Exchange was slightly negative. The situation in Norway in 2015 was not unlike in 2014 when the market was down 3% despite a further drop in the oil price of 25%. The oil part of the Oslo Stock Exchange was down about 10% while the non-oil part was up accordingly.

Effective 1/1/2014, the fund's investment mandate changed. Read more on page 32.

^{*}Fund start date

**The benchmark index prior to 1/1/2010 was the Oslo Stock Exchange Benchmark Index (OSEBX).

GOOD **GERMANS**

Our two German companies, Continental and SAP, delivered good results throughout the year and were rewarded by an increase in share price of around 30% each. Continental recently increased its own revenue expectations to over EUR 39 billion for the full year 2015, while they stated that the margin will be over 11%. The company continues to deliver a return on equity of around 25%, together with a strong cash flow. We expect them to continue to perform well.

BIG DATA

SAP is benefiting from its unique position in handling large amounts of data. The company is growing 10% per year, increasing its focus on what it does best, and profitability is good. We believe that SAP will strengthen its position further, since utilisation, optimisation and productivity in handling large amounts of data is becoming increasingly important in all major businesses.

RAPID IMPROVEMENT

The Danish company Lundbeck entered the portfolio in the spring, and we have already witnessed an almost 60% increase in share price. In this case too, management changes have been a central factor. Kåre Schultz, former COO for Novo Nordisk, took over the reins of the company and quickly introduced much needed and substantial changes in the company. Lundbeck, which produces neurology drugs, has a pipeline of exciting new products which are approaching market launch. We also have high expectations regarding the new management's ability to implement cost cutting.

POSITIVE CHANGES

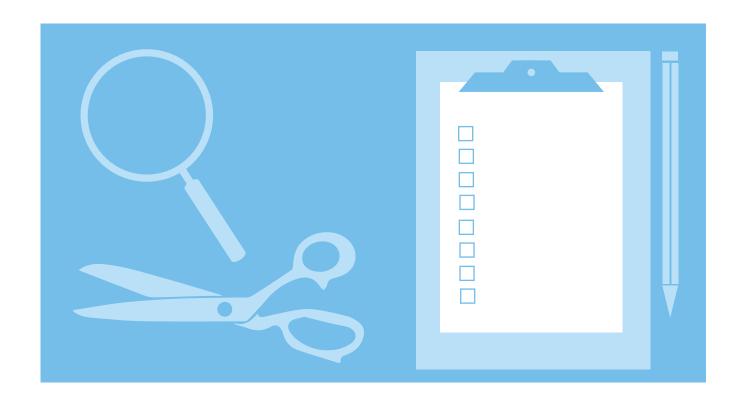

Carlsberg was able to demonstrate a strong share price performance after the new CEO presented the restructuring plans and new strategy for the next few years. Carlsberg has long been plagued by weak management and an overly high cost level. We look forward to the positive changes that the new management is in the process of implementing.

FALLING PRICES

Norsk Hydro was the stock that detracted the most from the fund's performance in monetary terms. The share price fell over 20%, mainly due to the drop in aluminium prices. Production in China is steadily increasing which has created overcapacity globally and production cuts among western producers could not make up for this. Demand for aluminium is stable and good and we expect that the aluminium market will become more balanced towards the end of the year. This is because we anticipate that several Chinese producers will eventually have to implement production cuts as they are far from being profitable given the current aluminium price.

HEADWIND AND CORRUPTION ALLEGATIONS

There was renewed turbulence around Swedish Teliasonera related to potential bribery in former Soviet states. The company is in the process of reducing its exposure to Eurasia. Operations in Nepal were sold at the end of the year and more is expected to come in 2016. We expect that the company will manage to maintain an attractive dividend in a zero interest rate environment over the next few years, even without sales growth.

Concentrating the portfolio

Stock picking is something that needs to become even better going forward, something we clearly saw the outline of in the second half of 2015. We have also improved our decision-making process, in particular when it comes to companies that do not live up to the original investment thesis. We have spent the year continuing the process of concentrating the portfolio.

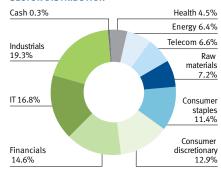

As usual, there are things to be concerned about at the start of a new equity year, such as developments in China, currency movements, commodity prices, increasing inflation and geopolitical events. As always these concerns will change shape throughout the year and new uncertainties will emerge. We do not speculate about these types of events but remain prepared to increase our exposure to good companies that come on sale as a result of general market turbulence. Our primary task is to invest in high quality companies that generate good cash flow and whose current valuation does not reflect this.

As portfolio managers we believe that a more concentrated high quality portfolio offers better opportunities for good risk adjusted returns thanks to closer monitoring of the companies and greater manoeuvrability. At the end of the year the portfolio consists of 57 companies of which the 35 largest investments account for 93% of the portfolio while the top 10 account for 53%. At the start of the new year the portfolio (top 35) is priced at 1.34 times book value and around 10 times 2016 expected earnings. For the same companies we anticipate a combined share price increase of 47% in the next 2-3 years. In other words we are optimistic entering the new year.

Weak emerging markets and volatile currencies

Emerging markets weighed on the fund in 2015 – in part due to weak currencies. As the fund enters a new year we see a risk of corrections as well as opportunities in to be found in volatility.

PERFORMANCE

The reason for the underperformance relative to the benchmark index is the poor performance of emerging markets, where both share prices and currencies measured against the USD, have fallen significantly. This is due in part to the fall in commodity prices, but also to the disappointing developments with regard to corruption and democratic reforms in Russia and China which seem to be moving in the wrong direction. Brazil, China and Indonesia were detractors from the fund's absolute and relative return. The US was a positive absolute contributor, but negative in relative terms. Europe contributed positively at stock and country level.

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments.

USA

Despite the fact that the US was the best contributor to absolute return, we made the wrong choice in terms of sectors. We had too much exposure to hotels, a sector that was down 30% in USD terms, and the health sector, which is often considered an alternative to bonds, and is therefore interest rate-sensitive.

At the start of the year there were clear expectations that interest rates would be hiked in the US. The US central bank, the Federal Reserve, increased interest rates towards the end of the year. The US ten-year Treasury bond hit bottom at the end of January 2015 at 1.64% and ended the year at 2.27%.

While the expectations about both the Federal Reserve and the US ten-year Treasury bond were to some extent met, the credit spreads were substantially higher at the end of the year. This was particularly the case for companies with the highest debt ratios, but less indebted companies – like the ones we typically invest in – were also affected.

With regard to the results from our US investments, these were as expected with an interest rate hike. What does that mean? When an interest rate hike is expected, typically companies with relatively high debt ratios perform more poorly than others. And that is precisely what happened.

Our best US contributor was PS Business Parks, which has almost no interest ratesensitive debt, while our worst was Ashford Hospitality Trust with a debt ratio of 55-60%. The hotel company was extremely successful in the period from 2007 to 2010, and is in our opinion misunderstood. Last year developments in the hotel sector were influenced by overly optimistic expectations about a further recovery in room rates, although they did actually end up on target. There was also the AirBnB factor which weighed down the sector.

When the US interest rate level increases, it also makes financing more difficult in emerging markets. If US investors can get a risk premium of 2 to 4 percentage points extra by investing in relatively safe domestic industrial bonds, the risk premium for companies in emerging markets becomes significant. The big losers are then companies with loans in US dollars and investments in domestic currencies.

The Germany property company Deutsche Wohnen was the best contributor to SKAGEN m2 last year. Pictured here is one of the company's properties, a hospital complex in Berlin.

EUROPE

Europe was a positive contributor in both absolute and relative terms throughout the year. Investments in Germany and Spain were large positive contributors to both the absolute and relative performance of the fund.

In Spain there were clear positive trends in the autumn of 2013. However, parts of the market became overheated and we were sceptical about investing there given that many property companies were set up as blind pools where you had little idea about what you were buying. During 2014, new opportunities arose in the Spanish market, however, and we chose to invest in Melia Hotels and Axia, which focus on hotels and offices respectively. Both companies have internal management and Axia has delivered solid results in the just under 2 years that the company has been in operation.

Our German apartment investments in Deutsche Wohnen, the year's best contributor, and Westgrund have been extremely successful. We have sold out of the latter.

Our investment in the dysfunctional German office company DiC Asset has also been positive. This is a typical SKAGEN investment where everything looks wrong to start with and where there is great potential for improvement. The management has been replaced and they have reduced the debt ratio throughout the year to an acceptable level. It looks as though they will continue to improve their operations. The company is increasing its revenues from the management of real estate funds. This requires less equity and ensures a stable cash flow.

Spain's leading hotel group Meliá Hotels International was founded in 1956 in Mallorca. Today the company has more than 350 hotels spread over 35 countries. Pictured here is the view

EMERGING MARKETS

The biggest negative surprise in 2015 came from Brazil. In addition to a sharp fall in oil price, the ongoing corruption scandal in Petrobras has had a negative impact on the country's performance.

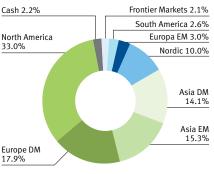

There were hopes that Brazil would develop in a more democratic fashion more quickly than has been the case. Investors are justifiably sceptical and it may take a long time to carry out the subsequent clean-up among business leaders and politicians.

Brazil was also the country where the effects of the exchange rate movements were worst in 2015. General Shopping, which we have now exited, borrowed money in US dollars at an exchange rate of 1.6 against the rais. The exchange rate then rose to 4, which caused the original loan to more than double in size in local currency. To top this off, the property values nosedived, which meant that the company had to sell property in order to maintain the debt ratio at a sensible level and be able to service the debt. This was an extremely destructive process for the shareholders in the company. We have, however, retained a small position in a perpetual bond in the company. This bond has a price of 50 and a yield of 20%. This is attractive from a risk versus potential reward perspective.

A lot has been written about China's slowing economic growth and fluctuations on the stock market over the past few years. One of the big disappointments in 2015 had nothing to do with economic growth, but rather with how the country has handled stock market developments. Instead of allowing a lofty market to adapt to reality, the Chinese authorities have introduced measures that have significantly increased the uncertainty and prevented the market from carrying out a real valuation. These measures have ranged from bans on sales to other interesting fabrications such as measures against those who are considered "guilty" of causing the country's stock market to crash. SKAGEN m2 has chosen to sit on the side lines and monitor the developments.

The fund has only one purely Chinese investment, namely Soho China. The fund also has exposure to China via GLP, Shangri-La, CapitaLand and SM Prime. Soho China, GLP and Shangri-La performed poorly in 2015 but are nevertheless a natural fit in a long-term portfolio.

OUTLOOK

The US president Thomas Jefferson wrote a letter in 1816 saying that he preferred dreams about the future to stories about the past. Of course, very few people can say anything concrete about the future, but one thing is certain: property will continue to be an attractive investment for dividend-focused investors.

In 2015 a lot of attention was focused on the upcoming rate hikes in the US. Although this has just started to materialise in industrial bonds (including property), it is difficult to imagine that there will be significant rate hikes of several percentage points on government bonds in the foreseeable future. Inflation will also bring about rental price increases and net cash flow after debt payments will continue to increase since most property companies have considerably better balance sheets now than before the financial crisis.

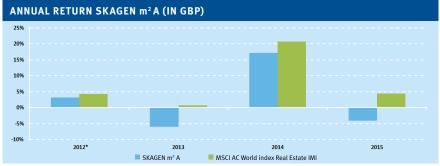

At the time of writing, a number of our companies are providing a direct yield of over 4%. Even though there is the risk of reduced dividends in some of our companies, the cash flow is a healthy basis for handling the uncertainty. In other words, it is important to observe how the management in the various companies handle capital structure because it has great significance for long-term value creation. By this we mean focus on priorities between growth in real estate stock, payment of dividends and repayment of debt or repurchase of shares. It is often the case that the best investments one can make in bad times is to buy one's own property by means of share buybacks rather than new property purchases.

The markets have got off to a bad start in 2016. It is therefore important to be aware that investors have only to a limited extent been too optimistic in their company valuations during the recovery. There has at all times been a healthy portion of scepticism and balanced risk taking. This involves less risk for sharp downturns. However, at the same time, we have to be prepared that there may be moderate corrections in 2016 – it could be a good year to find opportunities in substantial volatility.

 $[\]star$ Figures shown are indicative, based on a conversion of the NOK values to GBP at the exchange rate of NOK 13.0425 / GBP1.

Why do the effects of currency depreciation vary so widely?

Many commodity-producing countries have experienced a significant weakening in their terms of trade over recent years. Exports pay for far fewer imports. Some countries, such as Russia and Brazil, have subsequently experienced significantly higher inflation. Others, such as Norway and Chile, have only seen a moderate rise in inflation. What is the cause of this discrepancy? And what lies in store for 2016?

Given that the fall in commodity prices, particularly oil, can mainly be attributed to new technology, this should have an overall positive effect on the global economy. However, there is also a distribution effect.

The effect of the price drop differs depending on which side of the commodity market a country is on. Some countries, like India and Japan, have seen benefits for their terms of trade while others, like Norway and Russia, have lost out. Inflation typically rises when a country's terms of trade are substantially impaired because the exchange rate weakens. However, the outcome can vary significantly.

In Russia consumer prices have risen 19% since the oil price began to plummet in June 2014. In Brazil, the effect has been almost identical. In the same period, that is, up until November 2015, consumer prices in Norway have risen only 4% - only 1 percentage point more than before the oil price drop. In Canada the consumer price increase has been even more modest.

Norway as an example

Why do the effects of inflation vary so much? It is probably due to monetary policy and the fiscal conditions. This can be illustrated by looking at what is happening in Norway now versus the situation in the mid-1980s. Countries like Norway and Chile would likely be experiencing the same thing now that Norway did in the 1980s - if they had the same political framework that Norway had back then.

In percentage terms, the oil price from 1985 until the spring of 1986 sank by the same amount that it has fallen now since the summer of 2014. From May 1986 until May 1987, consumer prices in Norway increased 10%.

Why was the outcome so different then? In the 1980s, Norway did not have an inflation target. The central bank was under orders to keep the FX value of the Norwegian krone stable - at the level that the government thought appropriate. Since the government was in the habit of adjusting the FXpeg, inflationary expectations were not anchored. As a result, when the government devalued the krone by 12% in May 1986, it was not many weeks before inflation went from an annual rate of around 5% to around 10%.

Since June 2014 the krone has weakened by around 24%. One reason why inflation has not taken off now is that there has been a credible inflation target since 1999. With a reasonably clear view of how much prices will rise in future, price setters are less vulnerable to movements in the foreign exchange rate.

However, the inflation target is not the only reason for the difference in inflationary outcomes between commodity exporters. Colombia, for example, has had an inflation target as long as Norway has, but this did not stop inflation there from rising to 6.4% in November 2015.

The other explanation as to why a noticeable weakening in terms of trade may have so little impact on inflation is the solidity of a government's finances. In 1986 it was not clear whether the Norwegian government would be able to adapt its finances to a protracted low oil price level. The prospect of weaker government finances typically results in higher inflation - and a further weakening of the exchange rate. The Norwegian government has now accumulated substantial financial wealth so concerns about government finances have not contributed to higher inflation.

The effect on inflation has been minimal in Chile also, where the terms of trade have weakened as much as in Norway due to the fall in copper prices. The Chilean government has net assets however, and its expenditure remains low. This, combined with an inflation target, means that people's faith in the government's finances remains intact.

What is behind the discrepancy?

Neither Russia nor Brazil has a credible inflation target or the prospect of healthy government finances. As a result, when the terms of trade in these countries received a blow, inflation soared.

Could it be that Norway, and other commodity-producing countries, have not yet seen the full effects of the weakened terms of trade? As for Norway, both the Norwegian Central Bureau of Statistics (SSB) and the central bank believe there will be a short-term mild increase in inflation – they estimate that it will be around 2% in two years. Could they be mistaken?

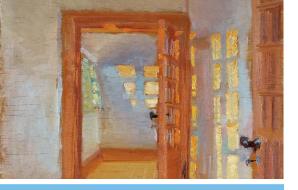

Two things could cause an unexpected leap in Norwegian inflation. The price of imported goods, which fell steadily between 1996 and 2004, increased 4.3% last year, and there is likely more to come. If this pulls inflation up enough for people to lose faith in the inflation target, prices could accelerate.

The second influencing factor would be if the oil price were to fall further. If this happens, the Norwegian government would quickly need to balance the budget by eating into the sovereign wealth fund. Although there is a lot to draw on, Norway's oil-dependent politicians would likely need to detox quickly in order to prevent an extra dose of inflation.

If commodity prices in general fall further, other countries' governments, like that of Chile, would have to plot a more temperate expenditure policy path in order to avoid uncomfortably high inflation.

Weighed down by emerging markets

SKAGEN Tellus' investments in emerging markets and peripheral Eurozone countries that did not pay off as we had expected. In addition, the fund underperformed the benchmark index as it had less exposure to Japanese government bonds.

The fall in commodity prices in 2015 had a negative impact on bonds and exchange rates for most commodity-producing countries. We waited too long to trim our investments in countries like Brazil and Colombia. Meanwhile, contrary to our expectations, the fall in commodity prices did not have a positive effect on bond prices and currencies in emerging market countries which import commodities.

Looking ahead to 2016, the fund is now positioned for commodity prices generally to remain low. Some commodity market countries with strong government finances and inflation targets have likely experienced a sharper fall in currency price than the fundamentals would otherwise indicate. In Chile, for example, where the currency has depreciated in line with the slightly lower copper price, we think the conditions are in place for the currency to appreciate. Canada is another good example. A combination of a credible inflation target and solid government finances indicate that the currency will appreciate. The fund is therefore invested in both these commodity-producing countries.

We sold out of Turkey and do not plan to reinvest there for the time being. Even though the country will profit from continued low commodity prices, the political uncertainty is too great. India, on the other hand, has good political leadership and the country should be able to benefit from low commodity prices this year. We believe in lower inflation and a stronger rupee, and the fund is therefore invested in a security issued by the supranational bank, the European Bank of Reconstruction and Development (EBRD).

We had problems navigating the Eurozone periphery last year. The negotiations around a new debt package for Greece were more drawn out than expected and this had a greater impact on interest rate spreads in the Eurozone than we had anticipated. Last summer we believed that there was a 50-50 chance of Greece exiting the Eurozone. Since we are investors, not gamblers, we therefore sold out of our positions in the other peripheral Eurozone countries.

During the autumn, we entered into positions in the Eurozone periphery that we believe will deliver good returns this year. The positions are relatively small and divided between Slovenia, Portugal, Spain and Greece. We do not believe that the European Central Bank will hike interest rates - further rate cuts and a more unconventional monetary policy are more likely. With continued economic growth and better government finances, the conditions are favourable for lower interest rates in the Eurozone periphery.

Around 30% of the fund is invested in USD-denominated government bonds. Most, but not all the bonds have low duration. Although the Federal Reserve hiked the interest rate by 25 basis points in December, we do not believe in higher long-term policy rates. We think there is a greater chance of slightly lower long-term rates. Low inflation is making the Fed cautious. Nevertheless, relative to the European Central Bank, the Federal Reserve will appear to have tightened with this monetary policy, which will likely in turn strengthen the dollar. We therefore expect to make bond and foreign exchange profits on our exposure to the dollar.

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments.

NOTICE

Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skill, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments. There are no subscription costs

SKAGEN Vekst has a fixed management fee of 1% per annum. Returns exceeding 6 % p.a. are shared 90/10 between the unitholders and the management company. A charge of the variable management fee may solely be made if the unit value as at December 31st exceeds the unit value at the previous charge/settlement of the variable management fee (the high watermark).

SKAGEN Global has a fixed management fee of 1% per annum. Better value development measured in percent in the fund's net asset value compared with the MSCI AC World Index (in NOK) is shared 90/10 between the unitholders and the management company.

SKAGEN Kon-Tiki has a fixed management fee of 2% per annum. Better value development measured in percent in the fund's net asset value compared with the MSCI Emerging Markets Index (in NOK) is shared 90/10 between the unit holders and the management company. However, the total annual management fee charged may not exceed 4% of the fund's average annual asset value.

SKAGEN m² has a fixed management fee of 1.5% per annum. Better/worse value development measured in percent in the fund's asset value compared with the MSCI ACWI Real Estate IMI (in NOK) is shared 90/10 between the unit holders and the management company. The total management fee charged constitutes a maximum of 3 % and a minimum of 0.75% per year.

SKAGEN Focus has a fixed management fee of 1.6% per annum. Better/worse value development measured in percent in the fund's asset value compared with the MSCI World AC TR Index (in NOK) is shared 90/10 between the unit holders and the management company. The total management fee charged constitutes a maximum of 3.2% and a minimum of 0.80 % per year.

SKAGEN Global, SKAGEN Kon-Tiki, SKAGEN Focus and SKAGEN m2 may be charged a variable management fee even if the fund's return has been negative, as long as the fund has outperformed the benchmark. Conversely, the fund may have a positive return without being charged a variable management fee, as long as there is no outperformance of the benchmark. The fixed management fees are calculated daily and charged quarterly. The variable management fees are calculated daily and charged annually.

The annual management fee is 0.8% for SKAGEN Tellus and SKAGEN Credit EUR and 0.5% for SKAGEN Avkastning. The management fee is calculated daily and charged quarterly.

Please refer to the product sheets and prospectuses for a detailed description of the cost, etc. They are available upon request from SKAGEN Funds or at www.skagenfunds.co.uk

 $[\]star$ Effective 1/1/2014, the fund's investment mandate changed from investing a minimum of 50% of its assets in Norway to investing a minimum of 50% of its assets in the Nordic countries. This means that returns prior to the change were achieved under different circumstances than they are today. The fund's benchmark index prior to 1/1/2014 was an evenly composed benchmark index consisting of the Oslo Stock Exchange Benchmark Index (OSEBX) and the MSCI All Country World. The benchmark index prior to 1/1/2010 was the Oslo Stock Exchange Benchmark Index (OSEBX). The benchmark index prior to 1/1/2010 was the Oslo Stock Exchange Benchmark Index (OSEBX). The benchmark index prior to 1/1/2014 it was OSEBX / MSCI AC (50/50).

** The benchmark index prior to 1/1/2010 was the MSCI World Index.

****The benchmark index prior to 1/1/2014 was the MSCI World Index.

****The benchmark index prior to 1/1/2013 was Barclay's Capital Global Treasury Index 3-5 years.

Agenda for the electoral meeting:

- Election of chairperson and two unit holders to sign the minutes
- Board of directors' annual report
- Auditor's report 3.
- 4. Election of one board member and one deputy board member to the board of directors of SKAGEN AS
- The election committee proposes that the current board member Per Gustav Blom be re-elected as unit holder-elected board member for a term up to 2018
- 6. The election committee proposes that the current deputy board member Aina Haug be re-elected as unit holder-elected deputy board member for a term up to 2018
- Election to the nomination committee 7.
- 8 The board proposes that Trude Marit Risnes be elected for a term up to 2019
- 9. Questions sent in by unit holders

Advance voting on My Page

Unit holders may cast advance votes via My Page (log in from www.skagenfunds.com). Alternatively you may send in your votes by email to legal@skagenfunds.com or by post to SKAGEN, P.O. Box 160, 4001 Stavanger, Norway. Advance votes much reach SKAGEN by 4 March 2016 at the latest. Your units as of 4 March 2016 will constitute the basis for the calculation of the number of votes. If you have voted in advance, you do not need to register on arrival at the meeting.

Each unit is entitled to one vote at the unit holders meeting. Unit holders may vote by proxy. Approved proxy forms are available by contacting us on 0207 408 2500. Please remember to bring a proof of identity and, where relevant, a certificate of incorporation.

Unit holders are entitled to discuss questions which are submitted in writing to the board of directors of the management company up to one week prior to the meeting. With the exception of the elections, the election meeting may not make any resolutions that bind the funds or the asset management company.

Funds discussion

After the formal part of the electoral meeting, Head of Wealth Management in Norway, Pål Bergskaug, will talk about the market outlook. There will then be a discussion about the funds with some of the portfolio managers.

You can find further information on our website www. skagenfunds.co.uk or by contacting us on 0207 408 2500. Light refreshments will be served and the meeting is open to everyone.

Best regards

The Board of Directors of SKAGEN AS

Henrik Lisaeth

Chairman of the Board of Directors

2015 from the Board's perspective

2015 was a challenging year for active managers like SKAGEN. After a weak first half, the second half of the year showed signs of improvement, which gives inspiration for future efforts.

The last year

Over the past few years, investors' preference has moved from active management to passive management, also known as index funds. As active managers, SKAGEN has felt the effects of this in the form of reduced assets under management. At the same time, we have maintained a good client base. For our clients, the returns in 2015 for most of the funds were lower than the benchmark indexes the funds measure themselves against. There are several reasons for this, which are covered thoroughly in the portfolio managers' report. A few important explanations that should be highlighted however are:

- The equity market has favoured large, established and relatively expensive companies, preferably in the US. SKAGEN is and has been underweight US companies, given our investment philosophy. SKAGEN is a value manager, but the majority of 2015 was favourable for growth stocks. Towards the end of the year, there were signs that this trend was changing.
- Investors withdrew substantial amounts of money out of global emerging markets in 2015, and this had a negative impact on several of SKAGEN's investments. It is too early to conclude whether this development will stop and reverse.

Unit holders in SKAGEN have historically been able to enjoy good absolute and relative returns. The returns in 2015 have not been on a par with what clients have been used to and that we in SKAGEN are satisfied with. Our clients should know that SKAGEN is using last year's adversity as inspiration to strengthen SKAGEN's organisation in the future, and we stand firm by our overall value philosophy with a focus on reasonablypriced companies.

Improved processes

During the year the portfolio team has focused on how we apply the investment philosophy. The equity fund portfolios have become more concentrated and with a greater focus on the companies that the managers believe have the best potential to provide clients with excess return. This has already yielded results in the second half of the year. Even stronger demands are now placed on the companies being invested in. Our processes to evaluate the likelihood of an investment yielding excess return have been further improved. In addition we have improved the process and discipline around companies that do not deliver relative to the original investment thesis.

Stable ownership

SKAGEN is owned by the company's founders and key personnel. The main owners are Kristoffer Stensrud, who is active in the company as portfolio manager, and Tor Dagfinn Veen and Åge Westbø, who manage their ownership via their joint company Nansen Capital Partners. The ownership model ensures the long-term independence and alignment of interests that is the bedrock of SKAGEN.

In 2015 changes were made to the Board of the company. After 17 years at the helm, Chairman of the Board Martin Gjelsvik, stepped down at the same time as the Board was expanded from five to six members. The new Board members Henrik Lisaeth and Leiv Askvig were elected by the company's shareholders. Lisaeth is the new Chairman of the Board. Anne Sophie Stensrud was elected a Board member, having been deputy board member for 12 years.

International presence

SKAGEN has for more than ten years been expanding its activities beyond Norwegian borders. Markets outside Norway now account for over half the assets under management. Work with international clients has given us valuable insight and new perspectives regarding how we can best provide all our unit holders with better service. We were among the first in Norway to remove subscription and redemption fees as a result of strong price competition in Sweden and we were quick to establish unit classes due to stricter regulations in the UK and the Netherlands. Further adaptation to international regulations will be an important part of SKAGEN's work going forward.

The year ahead

As unit holders, you are well aware that SKAGEN has a limited number of funds and that it can be wise to combine several funds in a savings portfolio. Clients who combine equity, bond and money market funds are better equipped to endure the fluctuations in the market, at the same time as a savings portfolio can be tailor-made to suit an individual client's risk profile and preferences. SKAGEN is now working to be able to offer more complete savings solutions, in addition to individual funds. There are many competent advisors in SKAGEN's organisation who can assist unit holders in finding the optimal savings portfolio.

The fund industry is undergoing continuous development, both technological and regulatory. In 2015 we launched new web pages and we are in the process of implementing our new trading solution in all the markets we operate in. This will make

it easier for clients to have an overview of their investments and enable us to provide competitive solutions.

An exciting development over the past year has been the increasing popularity of combination funds. This type of fund, together with so-called factor funds and multi-asset funds, are among the savings forms that have grown most in Europe in 2015.

Operating in an international market means that we must follow the regulatory requirements that apply in the various countries. In 2016 a Common Reporting Standard (CRS) will be introduced, which is an OECD-initiated international framework for sharing tax information beyond country borders. As unit holders this means that you will have to fill in relevant information when purchasing units.

Responsible investing

SKAGEN has since start been open and transparent about the companies in the portfolios. In an increasingly globalised world we see an increased need for information demonstrating that our investments are sustainable and in line with the principles for responsible investment. Responsible investment is an integral part of our in-house investment process. We assess

sustainability issues related to all investments in the same way as we evaluate other key figures in companies, since sustainability issues can impact both the risk and the return of an investment. In order to facilitate the evaluation we have established a policy for responsible investing, also known as ESG (Environmental, Social and Corporate Governance). The policy is available on our website.

Clients in focus

One of SKAGEN's values is to be "Unique", a quality we have valued since the company was established in 1993. We believe it is crucial to listen to clients at the same time as we strive to deliver the best possible risk-adjusted returns. Our clients are key in determining how SKAGEN shall develop. We value dialogue with our clients, whether it is face to face or digitally. In 2016 we will enhance analysis of clients' user behaviour in order to be able to provide even better services in future.

SKAGEN is not better than the people who work here. That is why in 2016 we will further develop our competence development program for employees, so that we can in future continue to deliver the best risk-adjusted returns, service and communication to our clients.

OWNERSHIP STRUCTURE

Others	10,42			

THE ELECTION COMMITTEE

The election committee consists of Barbro Johanson (Chair), Per Olof Höglund and Terje Vareberg.

The election committee proposes candidates for unit holder representatives for the Board of Directors of SKAGEN AS.

Targeting our efforts in social responsibility

In SKAGEN we have worked with social responsibility (CSR) and sponsorship of various charitable organisations for many years, focusing in particular on Kolibri, Doctors Without Borders and SOS Children's Villages.

Starting in 2016 we have decided to increase our focus and concentrate our efforts around one organisation. As a result, we are expanding and stepping up our cooperation with SOS Children's Villages while we phase out our sponsorship of Doctors Without Borders and Kolibri, which will end at the end of this year.

By better targeting our CRS activities, we wish, in cooperation with SOS Children's Villages, to maximise the potential of the sponsorship by increasing our joint activities and promoting the wonderful work that SOS Children's Villages carry out to the benefit of millions of children around the world.

Scandinavian agreement

SKAGEN has chosen to enter into a Scandinavian corporate agreement with SOS Children's Villages with global reach, rather than have local agreements with different organisations as was the case previously. In this way we will achieve a uniform profile across markets.

In concrete terms, we have Main Partner status in Norway, Sponsor Partner status in Sweden and Social Partner status in Denmark. In other market areas we refer to the Scandinavian agreement.

Why SOS Children's Villages?

We chose SOS Children's Villages because the organisation is well-known, is reputable and stands for strong values that reflect those of SKAGEN. The organisation has existed for more than 60 years and is represented in 134 different countries.

In addition to fostering children in children's villages, they carry out a great deal of preventive work through their family programs whereby they provide support and assistance to vulnerable families. They also set up health clinics and schools that are open to all and benefit the entire local community.

All in all, they have a tried and tested business model that has proven to be successful. Their work results in wellfunctioning and well-educated young people, some of whom return to put their skills to work to support their local community after they have completed their education. It is a positive cycle which has far-reaching consequences.

The project that SKAGEN supports

SKAGEN has chosen to support a school situated in an SOS Children's Village in the centre of Viet Tri, the capital of the Phu Tho province in Vietnam. Viet Tri City lies approximately 80 km north-west of Hanoi and is home to an estimated 260,000 people.

In spite of various government initiatives, many families in the Phu Tho Province continue to live in poverty. Many families have difficulty meeting basic needs like food and for many people education is but a distant dream

The SOS Children's Village in Viet Tri currently provides a loving home for up to 150 children, and one of the many things that this SOS Children's Villages program offers is the SOS Hermann Gmeiner School that SKAGEN supports. (Hermann Gmeiner is the founder of SOS Children's Villages). The financial support for the SOS school goes towards materials, books, the education of qualified teachers, teachers' salaries, running and operational costs, as well as maintenance costs. The school caters for up to 1,250 children aged 1-12. There is also a canteen where children can eat, thus ensuring they have at least one nutritious meal a day. Most pupils perform well at school, increasing their chances of going on to further education, enabling them to work and be able to support themselves and their dependents.

For SKAGEN, this sponsorship is an investment in education and therefore the future. The sponsorship contributes to providing children with knowledge and skills through education. This not only changes the children's future prospects, but also contributes to building up the community and creating sustainable development. It is social responsibility which leaves lasting PRINCIPLES FOR RESPONSIBLE INVESTMENT

ONGOING EFFORT

SKAGEN boosts focus on sustainability

During 2015 and as part of our long-standing commitment to the UN supported Principles for Responsible Investment, we have committed to a long term enhancement of our approached to **Environment, Social and Corporate Governance** (ESG) issues.

Over the past year we have updated our ethical guidelines and voting policy and combined them to create a comprehensive, Board-approved policy for how we will invest responsibly. The policy is available on our website and covers all funds and asset classes in SKAGEN.

SKAGEN believes that investing in sustainable companies pays off in the long term. Since 2002 we have focused on integrating ESG into the investment process to make betterinformed investment decisions. All investments are screened and evaluated against our updated policy and reviewed in terms of their sustainability.

Voting

SKAGEN has, in 2015, taken an even more active role than previously on ESG issues. During the year, there were 232 votable general shareholder meetings, with 2,359 votable items and SKAGEN voted at 86% of these meetings. Where we voted, in 7.6% of the cases, we voted against the company's management on one or more items on the agenda. A general meeting voting percentage of 86 represents a 15 percentage point increase from the year before and is in line with our increased ESG focus.

Category	Number	Percentage
Number of votable meetings	232	
Number of meetings voted	200	86%
Number of meetings with at least 1 vote Against, Withhold or Abstain	69	30%
Number of votable items	2359	
Number of votes Against Management Recommendation	156	7.6%

SKAGEN has voted against items related to the issuance of equity without preemptive rights for existing shareholders, excessive management remuneration without links to results, election of board members that are not deemed sufficiently independent and transactions with related companies.

Our voting records are available on SKAGEN's web pages.

Engagement

During the year, SKAGEN has also engaged with some of the companies in our portfolios. In terms of ESG, we count the cases where we have had direct contact on a specific issue - regardless of how big or small the issue.

In 2015, SKAGEN conducted a total of 18 company engagements on various issues and of various magnitude. The largest engagement we had during the year was with the UK-based security company G4S to promote improvements and better disclosure of their conduct in light of controversies over the past decade. Based on our engagement with G4S, it is our view that they take the issues seriously and are working on improvements. The work with G4S is still ongoing at the start of 2016.

We continuously strive to improve the implementation of our ESG policy and the UN supported Principles of Responsible Investment. New issues may arise and improvements in processes are implemented on an ongoing basis. We have taken a big step during 2015 and are focused on further enhancements this year.

Board of Director's Report for SKAGEN's security funds 2015

At the end of 2015, SKAGEN AS (SKAGEN) managed combined assets of around NOK 100 million divided between five equity funds, six fixed income funds, one combination fund in addition to mirror funds and feeder funds. No changes have been made to the funds' mandates in 2015. The 2015 returns for the individual securities funds/unit classes are set out in the table below.

SKAGEN's equity funds in 2015

At the end of 2015, SKAGEN managed the equity funds SKAGEN Vekst, SKAGEN Global, SKAGEN Kon-Tiki, SKAGEN m2 and SKAGEN Focus. Our largest equity fund, SKAGEN Global, had assets under management of around NOK 45 billion (mirror funds included) at the end of the year. The Board is satisfied with the performance of SKAGEN Global in 2015. The other equity funds delivered weaker returns than targeted. This is due, amongst other things, to relatively low exposure to the US dollar, which appreciated during 2015, as well as SKAGEN's exposure to emerging markets which performed poorly in 2015 overall (more on this in the market risk section below). Brazil and Turkey were particularly decisive in this regard.

In 2015 SKAGEN's investment process was reviewed with a view to improvement. The result of this work is expected to yield results going forward. It was therefore gratifying to observe improved relative returns in the second half of 2015 for SKAGEN Kon-Tiki and SKAGEN Global.

SKAGEN launched a new equity fund, SKAGEN Focus, in 2015. At the end of the year the fund had assets under management of around NOK 1 billion. Institutional unit classes were also launched for our equity funds and one of our bond funds in 2015.

SKAGEN's fixed income funds in 2015

At the end of the year SKAGEN managed the money market funds SKAGEN Høyrente, SKAGEN Høyrente Institusjon and SKAGEN Krona and the bond funds SKAGEN Avkastning, SKAGEN Tellus and SKAGEN Credit. The latter is a so-called masterfeeder fund and consists of a number of independent securities funds associated with one another. The Board is satisfied that SKAGEN's money market funds continue to deliver good returns. The bond funds, however, delivered weaker returns. This was again due to their relatively high exposure to emerging markets.

Outlook for 2016

Global GDP growth in 2016 is expected to remain at around 3-4 percent. The general interest rate level will also likely remain low. The biggest challenges are elaborated on in the market risk section below. It is the Board's assessment that 2016 may turn out to be a relatively good investment year. It is, however, important to note that there is always significant uncertainty attached to the assessments of future conditions.

Risk management in SKAGEN's securities funds

SKAGEN monitors and measures risk in the securities funds in accordance with Norwegian laws and regulations. Each of the securities funds has a risk profile that is approved by the Board and reviewed at least once a year. The Board and the managing director regularly receive risk reports drawn up by the company's independent risk management function, which highlight relevant risk factors including market risk, credit risk, liquidity risk, operational risk, reputation risk and legal risk. Risk is therefore dealt with in a holistic manner.

The value development of all of SKAGEN's securities funds was in line with the normal annual fluctuations and their respective risk profiles. Over time, the highest return is expected to come from the equity funds, somewhat lower return is expected from the bond funds and the lowest return from the money market funds. The equity fund SKAGEN m² is expected to deliver a return between that delivered by the other equity funds and the bond funds over time.

Market risk

The securities funds' values are influenced on a daily basis by changes in industry and company-specific circumstances, foreign exchange rate developments, interest rate levels and the general economic conditions. This is known as market risk. Heightened political risk and potential changes in trade agreements, climate agreements and security measures in the global fight against terror make it more important to use scenarios and be able to adapt quickly. SKAGEN must be prepared for a range of future outcomes. The combined risk in our portfolios is mainly driven by common factors such as general market developments and the currency situation and currency risk in particular has been more important over the past year. Individual companies in the portfolio are further characterised by company-specific risk factors, but these are diversified away to a large extent by SKAGEN investing in companies operating within different sectors and different regions. We observe that it is most often the case that a stock or bond's contribution to risk in the portfolio is around the same as their weight in the portfolio.

For 2016 the Board expects continued high volatility from political unrest and structural problems in larger markets such as Brazil and China. Companies in emerging markets deliver and are expected to deliver

lower earnings than a couple of years ago, with risk being at least as high as before. The risk picture is supported by a number of factors, such as sluggishness in market improvements and reforms in emerging markets, observed and expected waning growth in China, a weak and volatile oil price, as well as heightened concerns around renewed unrest in financial markets. Financial market unrest can be triggered directly by central banks and/or falling creditworthiness in emerging markets.

On the other hand, emerging markets have greater potential for a performance increase, largely driven by higher expected earnings. Emerging markets are also usually less exposed to challenges in Europe and the US. Problems in Europe lingering from the financial crisis, including Greece's debt problems and the flow of refugees from Syria, are expected to have a greater impact on European markets than on emerging markets.

For SKAGEN's securities funds, the risk related to the funds' valuations measured in Norwegian krone has increased through 2015, mainly due to increasing currency risk. Some of the increase stems from the other market factors described above, and we expect a further risk increase for 2016.

For our fixed income funds, we expect increased credit spread volatility, i.e. increased fluctuations in a regime characterized by low interest rates due to varying liquidity. We also expect that a number of investors will switch investments between government and corporate bonds as well as between countries and regions at the same time as the different interest rate and company developments take place. The effect of such reallocation is expected to result in reduced liquidity for credit bonds issued by companies in certain sectors. The major credit rating agencies expect an increase in defaults in all regions, in Latin America in particular.

Credit risk

The fixed income funds' investments are based on analyses of each issuer's creditworthiness and the economic, macro political and institutional circumstances of the country in which the bond is issued. Credit risk is reduced by increasing demands in terms of credit worthiness and type of issuer. Counterparty risk is reduced by seeking delivery on payment

and by keeping a close eye on brokers' credit ratings, market credit premium and accounts.

Liquidity risk

The equity funds' liquidity risk is limited by monitoring reported traded volumes, an extensive counterparty network and the possibility of trading directly with counterparties outside the market. In addition, a certain cash position is maintained. A potential sharp fall in liquidity is tested and compared with historical data for the largest observed and expected redemptions over various time periods.

Operational risk

SKAGEN strives to have a good risk culture in the organisation where the attention to controls and risk lie with those responsible for the relevant tasks. Operational risk is managed by updating and learning from the incident register, amongst other things. Twice a year, undesirable events are evaluated by the company's compliance function in an internal control process involving the managers responsible for the various areas of activity. Risk is also assessed by the CEO on an overall level, and an assessment is made on a continuous basis about whether new measures shall be introduced and internal routines changed. The compliance function also discusses with the internal auditor and

reports the internal control process to the Board. Several internal control related projects are carried out annually with the approval of the Board whereby the goal is to make operations more efficient and implement goal-oriented measures to reduce operational risk. The external auditor performs annual financial controls and issues an independent statement pursuant to the ISAE3402 standard.

Redemptions

There were substantial redemptions from some of the equity funds in 2015. Liquidity in the funds has remained unchanged and the redemptions have been handled in a routine manner. The funds' liquidity was generally better at the end of the year than at the beginning of the year.

Administrative conditions

The securities funds have no employees. The company does not pollute the environment. All the securities funds are managed by SKAGEN. SKAGEN is located in Stavanger. All the securities funds use Handelsbanken as custodian.

Going concern

The Board confirms that the premise of the funds and the management company as going concerns continues to be fulfilled.

Proposal for the allocation of funds' income:

General notes 2015

NOTE 1: ACCOUNTING PRINCIPLES

All figures in NOK 1,000 unless otherwise stated.

The accounts for 2015 are prepared in accordance with the Norwegian accounting law and regulation for annual financial statements for securities funds.

Financial instruments:

All financial instruments, such as shares, bonds, certificates and interest rate swaps, are valued at fair value (market value).

Determination of fair value:

Securities are valued at market prices as of 31.12.2015.

Bonds and notes, for which there are no "marketmaker" prices, are at all times valued against the applicable credit spreads and yield curve.

Unlisted equities are valued according to the latest trading price, value adjustments made by brokers and/or internal valuations.

Currency exchange rates:

Securities and bank deposits/overdrafts in foreign currency are valued at the prevailing exchange rate at the time of pricing 31.12.2015.

Treatment of transaction costs:

Transaction costs in the form of commission to brokers is charged to expenses at the time of the transaction.

Allocated to unitholders for reinvestment:

Net taxable income in the fixed income funds, comprised of interest income, realised capital gain/loss and other income with deduction of management fee and transaction-related custodian costs, is distributed to the unit holders as the issue of new units as of 31.12.2015. For SKAGEN Krona and SKAGEN Credit SEK the distribution to the unit holders as the issue of new units is done as of 18.12.2015.

All distribution to unit holders in fixed income funds are treated as allocations of profit in $accordance\ with\ the\ regulation\ for\ annual\ financial\ statements\ for\ securities\ funds.\ Distribution$ from fixed income funds are accounted for by entering reinvestments as new units in the fund in the financial year.

NOTE 2: FINANCIAL DERIVATIVES

SKAGEN Credit holds interest rate derivatives. A more detailed description is given in the

The other funds have not held financial derivatives during the year.

NOTE 3: FINANCIAL MARKET RISK

Through investment in Norwegian and foreign businesses, the equity funds are exposed to share price, currency exchange and liquidity risks. The fixed income funds are exposed to interest and credit risks and liquidity risks. Furthermore, the fixed income funds are exposed to currency risks in those cases where the funds invest in currencies other than the fund's functional currency.

Overview of funds which have functional currency other than NOK:

	Functional currency
SKAGEN Krona	SEK
SKAGEN Credit SEK	SEK
SKAGEN Credit EUR	EUR

In addition to laws, regulations and articles of association regulating the risks in the funds, the funds are managed with a conscious focus on company-specific risks related to the companies constituting the funds' portfolios.

NOTE 4: CUSTODIAN COST

The funds are only charged transaction-related custodian costs.

NOTE 5: TURNOVER RATE

The turnover rate is a measure related to the average duration of the investments in the fund.

The turnover rate is calculated as whichever is the smaller amount of either purchases and sales of securities in the portfolio during the year, divided by average assets under managment during the year. The formula is an approach for calculating the funds' turnover rate.

The funds' turnover rate for the year 2015 was-

SKAGEN Credit NOK For all feederfunds it is the SKAGEN Credit SEK turnover rate in the masterfund SKAGEN Credit EUR SKAGEN Credit which applies.

NOTE 6: SUBSCRIPTION FEE

There are no subscription or redemption fees for any of the funds.

NOTE 7: REFER TO PAGES 51 TO 63

SKAGEN Vekst Note 8, 9, 10 & 11

NOTE 8. MANAGEMENT FEE

The fixed management fee is calculated for all classes in percent p.a. of the daily assets under management in the class as follows:

Unit class Fixed managment fee percent p.a.

A 1.0% B 0,8%

C 0,6%

In addition, unit classes A and B are charged a variable management fee of 1/10 of the return above 6 percent p.a. measured in Norewgian kroner, as long as the unit value on 31.12 is more than the unit value the last time the fund was charged a variable management fee (high watermark). Unit class C is charged a variable management fee of 1/10 of the better value development in the unit value than the balanced and continually rebalanced index composed of the MSCI Nordic Countries IMI Index and the MSCI All Country World Index ex Nordic Countries (Daily Total Return Net \$ measured in Norwegian kroner). The variable management fee in class C is charged/calculated only if the accumulated relative value development from the previous charge/calculation up to and including 31 December is greater than zero.

Management fee allocated to the respective unit classes:

2015

	Unit class A	Unit class B	Unit class C	Total
Management fee - fixed	79 598	84	2126	81807
Management fee - variable	11733	16	-	11750
Total management fee	91 331	100	2 126	93 557

Unit class Cwas launched on 01.01.2015.

^{*}Base price is set at the end of the last working day of the year and is based on the best prevailing estimate. Finalised figures as of 31.12 are used in the annual financial statement. Consequently minor timing differences may occur.

The sole difference between unit class A, unit class B and unit class C is related to the management fee, see note 8.

NOTE 10. TAX NOTE

Equity funds are, in principle, exempt from tax on gains and do not have the right to deduct losses on realisation of equities when calculating taxable income. Furthermore, dividends received from companies within the EU/EEA are, in principle, tax-exempt. However, 3 percent of dividends received from these companies are treated as taxable to Norway.

Dividends received from companies outside the EU/EEA are taxable. The funds may in addition be charged withholding tax on dividends received from all foreign companies.

The tax cost for the years 2015 and 2014 in SKAGEN Vekst is associated with withholding tax on foreign dividends.

NOTE 11. RISK AMOUNT (IN NOK)

SKAGEN Focus Note 8, 9 & 10

NOTE 8. MANAGEMENT FEE

The fixed management fee is calculated for all classes in percent p.a. of the daily assets under management in the class as follows:

Unit class Fixed managment fee percent p.a.

- 1,6%
- В 1,3% C 1,0%

In addition the three unit classes are charged a variable management fee of 1/10 better value $development in the unit value than the benchmark index \, MSCI \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, All \, Country \, All \, Country \, World \, Daily \, Total \, Return \, All \, Country \, All \, Count$ Net \$ measured in Norwegian kroner. The variable management fee is calculated daily and charged yearly on 31 December for all three unit classes. In the event of poorer value development in the unit value than the benchmark index, 10 percent of the underperformance is deducted from the fixed management fee. The total management fee therefore has an upper and a lower limit, so the combined fee may not exceed 3.2 percent p.a. and may not be less than 0.8 percent p.a. of the average assets under management in unit classes A and C. In unit class B the corresponding

Management fee allocated to the respective unit classes:

upper limit is 2.9 percent p.a. and lower limit is 0.5 percent p.a.

NOTE 10. TAX NOTE

The fixed income funds are taxable with 27 percent of net realised capital gain on interestbearing securities and financial contracts, interest income accrued, currency gain/loss, minus tax-deductible costs, which, amongst other things, include accrued interest costs. The taxable net profit is in principle distributed among unitholders so that the fund is in a non-taxpaying position.

NOTE 11. CURRENCY RISK

SKAGEN Credit does not use any kind of instruments to reduce currency risk.

NOTE 12. INTEREST RATE RISK

SKAGEN Credit holds interest rate swaps to reduce the interest rate risk in the fund. The risk is reduced by reducing the duration. The fund enters into contracts where the fixed interest rate is swapped by floating interest rate. The principal amount in the contracts will not be settled and consequently they are not booked in the fund's balance sheet. It is only the net receivable/ obligation which is booked in the accounts. Note 7 gives an overview of the interest rate swaps entered into as of end of year. Those contracts are representative of the contracts held by the fund during the year.

SKAGEN Credit EUR Note 8, 9, 10, 11 & 12 (in 1,000 EUR)

NOTE 8. MANAGEMENT FEE

SKAGEN Credit EUR is part of a master-feeder structure and SKAGEN Credit EUR is a feeder fund. $SKAGEN\ Credit\ is\ the\ master fund.\ The\ management\ fee in\ SKAGEN\ Credit\ EUR\ constitutes\ 0.8\ percent$ p.a. of daily assets under management in unit class A and 0.45 percent p.a. in unit class B.

Management fee allocated to the respective unit classes:

	2015		
	Unit class A	Unit class B	Total

Class 1 has the lowest and class 6 the highest credit risk. Risk class 1: Supranational organisations

Risk class 2: Government, and government guaranteed within the EEA Risk class 3: Government, and government guaranteed outside the EEA Risk class 4: County and local government

Risk class 5: Bank and financial institutions Risk class 6: Industry

 $All\,securities\,are\,traded\,in\,a\,telephone-based\,international\,market.$

Unit price as of 31.12.2015

TNOK 68.328 is allocated for distribution to unit holders. This will result in a reduction in the unit price equal to the distribution per unit at the time of distribution.

For SKAGENA Avk astning the FIFO principle is applied when calculating the realised capital gain/loss when selling securities.

 $^{^{1)}}$ Yield adjusted for management fee.

²⁾ Duration is a simplified expression of how much the price of the security will $change\ if the\ interest\ rate\ changes\ by\ one\ percentage\ point.$

 $^{^{3)}\}mbox{Yield}$ is the average annual return of an interest bearing security until

 $^{^{4)}} Securities \, are \, divided \, into \, six \, risk \, classes \, according \, to \, their \, credit \, risk.$

 $^{^{\}rm 5)}$ For liquidity in the portfolio as of 31.12.15, please refer to the balance sheet.

The Fund Management Company's Board of Directors Responsibility for the Financial Statements

The Fund Management Company's Board of Directors is responsible for the preparation and fair presentation of these financial statements in accordance with Norwegian accounting act and accounting standards and practices generally accepted in Norway, and for such internal control as The Board of Directors determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with laws, regulations, and auditing standards and practices generally accepted in Norway, including International Standards on Auditing. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or

Independent auditor's report - 2015, page 2

error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements are prepared in accordance with the law and regulations and give a true and fair view of the financial position of the mutual funds as at December 31, 2015, and its financial performance for the year then ended in accordance with the Norwegian accounting act and accounting standards and practices generally accepted in Norway.

Report on Other Legal and Regulatory Requirements

Opinion on the Board of Directors' report

Based on our audit of the financial statements as described above, it is our opinion that the information presented in the Board of Directors report concerning the financial statements and the going concern assumption, and the proposal for the allocation of the profit in each mutual fund is consistent with the financial statements and complies with the law and regulations.

Opinion on Registration and documentation

Based on our audit of the financial statements as described above, and control procedures we have considered necessary in accordance with the International Standard on Assurance Engagements ISAE 3000, "Assurance Engagements Other than Audits or Reviews of Historical Financial Information", it is our opinion that the Fund Management Company's management has fulfilled its duty to produce a proper and clearly set out registration and documentation of the mutual fund's accounting information in accordance with the law and bookkeeping standards and practices generally accepted in Norway.
